

The logo for EDD:E Energy Monitoring, featuring a red circle with a white wavy line to the left of the text "EDD:E" in large, bold, black letters. Below "EDD:E" is a red horizontal line, and below that is the text "ENERGY MONITORING" in bold, black letters.

City Electrical Factors (CEF), South Shields branch

In September 2011, as part of a trial to demonstrate the power of Edd:e, the CEF South Shields branch was fitted with an Edd:e system covering two distribution boards.

This allowed Utilitywise to measure 42 circuits; every circuit in the branch.

As well as accessing the usage data through the www.ask-eddie.com website the branch manager also received a monthly desk top consultancy report written by Utilitywise showing areas of high usage. The data showed a number of systems operating out of hours.

We were able to suggest a number of ways to save energy at the branch. Timers on the water heater, different timer settings on external and counter lights and office heaters made a quick and cost-effective saving.

"I have seen a saving of £80.50 per month, this represents 20% of my monthly electricity spend"
Wayne Anderson, CEF Branch Manager.
