

NEXT GOVERNMENT'S FIRST 100 DAYS IN POWER

WHAT DECENTRALISED ENERGY CAN DO FOR YOU

£ Reduce energy bills by up to **£900 per year** with a new and effective programme to insulate homes and buildings

£ Save up to **£1.57 billion** a year in electricity system costs through heat networks

£ Cut **£14.1 billion** off yearly energy system costs by 2040 through prioritising flexibility

CUT ENERGY BILLS

Reduce peak electricity demand by **65% by 2030** through the increased support of demand side response

Save up to **£1.5 billion a year** by 2050 through using more waste heat in our heat networks

Avoid spending **£3.5 billion on 4 new gas-fired power plants** by making the energy system more flexible

DELIVER SECURITY

Create **24,000 jobs** promoting a flexible energy system

Create **200,000 jobs** retrofitting homes with energy efficiency measures

Save **770,000 jobs** by defining a clear pathway to decarbonising industrial sectors

CREATE GOOD JOBS

45% increase in carbon savings by advancing flexibility

89 million tonne decrease in CO2 output through energy efficiency, heat networks and heat pumps

CLIMATE LEADERSHIP

THE NEXT STEPS

- Set a clear strategy to **deliver at least 20% of UK heat from subsidy-free, green heat networks by 2040**
- Require all mortgage lenders to **upgrade their building stock to an average of EPC Band C**

ade

Set an ambitious strategy for energy efficiency and decarbonisation of industrial sites outside of the clusters

Use electricity market reform to rapidly scale flexibility so that the system can handle 55GW offshore wind by 2030
